Computers and Biomedical Research

AN INTERNATIONAL JOURNAL

An Official Publication of the American Association for Medical Systems and Informatics

Endorsed by the American College of Medical Informatics

EDITOR: Homer R. Warner

EDITORIAL BOARD:

Hiroshi Abe
G. Octo Barnett
Morris F. Collen
Jerome R. Cox, Jr.
James F. Fries
David Garfinkel
William E. Hammond
Hubert Pipberger
Arnold W. Pratt
T. Allan Pryor
Edward H. Shortliffe
William W. Stead
Ove B. Wigertz
William S. Yamamoto

VOLUME 20, 1987

No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

0010-4809/87 $3.00

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 20

Number 1, February 1987

W. A. Sadler and M. H. Smith. A Computer Program for Variance Function Estimation, with Particular Reference to Immunoassay Data 1

Eckehart Cramer, Christopher D. McManus, and Dietrich Neubert. Estimation and Removal of Power Line Interference in the Electrocardiogram: A Comparison of Digital Approaches 12

Pia Carlo, Renata Finollo, Anna Ledda, Giuliano Donzellini, and Franco Caratozzolo. A Computerized System for Acquiring DNA Solution Viscosity Data 29

S. Guo, R. Simon, J. E. Talmadge, and R. L. Klabansky. An Interactive Computer Program for the Analysis of Growth Curves 37

Richard Simon and Richard Shaker. Interactive Statistical Analysis of Survival Data 49

F. Golferini and P. Facchin. Computer Diagnosis of Primary Headaches in Children 55

Howard A. Schwid. A Flight Simulator for General Anesthesia Training 64

Andrew Wohlgemuth. An Interactive Program for Determining Tentative Gene Assignments from Immunological Data 76

Eric D. Edmond, Sadeq Al-Hamouz, Raymond C. Tallis, and Chandrika Vellodi. Determining Drug–Drug Interactions and Related Effects on Microcomputers 85

Ralf P. Brueckner and Barbara Guller. QRS Areas Improve the Electrocardiographic Interpretation of Right Ventricular Hypertrophy 99

Number 2, April 1987

Eduardo Massad, Alejandro B. Engel, and Miguel A. L. Nicolelis. A Mathematical Model for Spirometry 105

P. I. Polimeni, P. Cunningham, M. D. Otten, and D. McCrea. Morphometric Quantification of Atherosclerotic Plaques by Computer-Assisted Image-Analysis of Histographs 113

Kyung S. Park and Nahm S. Lee. A Three-Dimensional Fourier Descriptor for Human Body Representation/Reconstruction from Serial Cross Sections 125

D. Eugene Lovelace and Suzanne B. Knoebel. An Editing Method for Computer-Assisted Ambulatory ECG Review Systems 141

R. Burattini, G. Gnudi, N. Westerhof, and S. Fioretti. Total Systemic Arterial Compliance and Aortic Characteristic Impedance in the Dog as a Function of Pressure: A Model Based Study 154

Dennis L. Parker, David L. Pope, Rudy Van Bree, and Hiram W. Marshall. Three-Dimensional Reconstruction of Moving Arterial Beds from Digital Subtraction Angiography 166
Carsten Emde, Steen Hannibal, Hans-Joachim Kaufhold, and Tom Stuebe. Transfer of Large Data Sets from Biomedical Research: Proposal for a Universal Data Header (UNIDAT 1.0) 186
Peter J. Haug, Homer R. Warner, Paul D. Clayton, C. Duwayne Schmidt, James E. Pearl, Robert J. Farney, Robert O. Crapo, Irena Tocino, William J. Morrison, and Philip R. Frederick. A Decision-Driven System to Collect the Patient History 193

Number 3, June 1987

Fred K. Hoehler. Balancing Allocation of Subjects in Biomedical Research: A Minimization Strategy Based on Ranks 209
Kermit A. Gaar, Jr. Oxygen Transport: An Analysis of Short-Term Blood Flow Autoregulation 214
Joyce Niland-Weiss, Stanley P. Azen, Tamara Odom-Maryon, Florence Lui, Cheryl Hagerty, and The Transfusion Safety Study Group. A Microcomputer-Based Distributed Data Management System for a Large Cooperative Study of Transfusion Associated Acquired Immunodeficiency Syndrome 225
Roy Rada, Bruce Blum, Edith Calhoun, Hafedh Mili, Helmuth Orthner, and Sarah Singer. A Vocabulary for Medical Informatics 244
C. F. Starmer, D. J. Cherveny, M. A. Dietz, and J. M. Smaltz. Managing Research Data with Self-Documenting Files 264
Curtis P. Langlotz, Lawrence M. Fagan, Samson W. Tu, Branimir I. Sikic, and Edward H. Shortliffe. A Therapy Planning Architecture That Combines Decision Theory and Artificial Intelligence Techniques 279

Number 4, August 1987

H. Åhlfeldt, H. Tanaka, M-E Nygårds, T. Furukawa, and O. Wigertz. Computer Simulation of Cardiac Arrhythmias 305
Krzysztof M. Rajkowski, Françoise Herve, and Nicole Cittanova. The Interpretation of Ligand Displacement Experiments: Calculations for Multisite Acceptors 324
Jean-Pierre Drouhard and Fernand A. Roberge. Revised Formulation of the Hodgkin–Huxley Representation of the Sodium Current in Cardiac Cells 333
Fernard A. Roberge and Jean-Pierre Drouhard. Using $\dot{V}_{max}$ to Estimate Changes in the Sodium Membrane Conductance in Cardiac Cells 351

ROBERT HOFFMAN AND DANIEL JEAKINS. Computer Quantification of Delta Activity in Sleep EEG 366
P. J. A. LAGO. A Fast Algorithm for the Computation of the Plasma Concentration Time Curve and Confidence Limits in Linear Pharmacokinetics 373
SHIMON ABBOUD. Subtle Alterations in the High-Frequency QRS Potentials during Myocardial Ischemia in Dogs 384
L. W. JENNINGS AND H. J. DOLLER. A Nonlinear Modeling Procedure Applied to Hippocampal Convulsant Activity 396

NUMBER 5, OCTOBER 1987

JOSÉ CAMPIONE-PICCARDO. Fast Algorithms for Predicting Operational Reading Frames following Splicing or Insertion in Expression Vectors 405
HO SOO LEE, QUIN-LAN CHENG, AND NITISH V. THAKOR. ECG Waveform Analysis by Significant Point Extraction. I. Data Reduction .. 410
QUIN-LAN CHENG, HO SOO LEE, AND NITISH V. THAKOR. ECG Waveform Analysis by Significant Point Extraction. II. Pattern Matching 428
G. HEJBLUM, S. HAZOUT, AND J. MIGNOT. The Algorithm of the Cockshafer Walk: A Movement Automaton Applied to the Construction of the Integrated Optical Density Profile of Prometaphase Chromosomes 443
CHRISTOPHER J. PORTIER AND A. JOHN BAILER. Simulating Failure Times When the Event of Interest Is Unobservable with Emphasis on Animal Carcinogenicity Studies 458
EVLIN L. KINNEY AND DENNIS D. MURPHY. Comparison of the ID3 Algorithm versus Discriminant Analysis for Performing Feature Selection 467
GERHARD WERNER. Methuselah—An Expert System for Diagnosis in Geriatric Psychiatry 477
TODD M. HERTZBERG, GERALD F. TREMBLAY, AND CHAN F. LAM. Computer-Assisted Localization of Nervous System Injuries 489
WESLEY M. GRANGER, DAVID A. MILLER, INA C. EHRHART, AND WENDELL F. HOFMAN. The Effect of Blood Flow and Diffusion Impairment on Pulmonary Gas Exchange: A Computer Model 497

NUMBER 6, DECEMBER 1987

H. KOBAYASHI, T. ABE, T. KAWASHIRO, K. TANABE, AND T. YOKOYAMA. Estimation of the Distribution Profile of Airway Resistance in the Lungs 507
LEIF SÖRNMO. A Model-Based Approach to QRS Delineation 526

J. L. Willems, Chr. Zywietz, P. Arnaud, J. H. van Bemmel, R. Degani, and P. W. Macfarlane. Influence of Noise on Wave Boundary Recognition by ECG Measurement Programs. Recommendations for Preprocessing 543
Shuyun Le, Kathleen M. Currey, Ruth Nussinov, and Jacob V. Maizel, Jr. Studies of Frequently Recurring Substructures in Human α-Like Globin mRNA Precursors 563
James L. Winslow, Matthew Bjerknes, and Hazel Cheng. Three-Dimensional Reconstruction of Biological Objects Using a Graphics Engine 583

Author Index for Volume 20 603

Information for Authors

Computers and Biomedical Research accepts papers for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Computers and Biomedical Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All manuscripts should be submitted to the Editor:

Dr. Homer R. Warner
Department of Medical Informatics
University of Utah School of Medicine
Salt Lake City, Utah 84132

Whenever a previously published paper by the author is important background for methods, data, or discussion in a manuscript, two reprints of the paper containing such material should accompany the manuscript to assist reviewers.

Manuscripts returned to authors for revision are considered "accepted for publication" as of the date an acceptable revised complete manuscript is returned to the editorial office. The editors and publishers cannot assume responsibility for manuscripts lost in the mail. Authors should therefore retain a complete copy for their files.

Form. Manuscripts should be typewritten and double-spaced throughout (including tables, footnotes, references, and figure captions); the original typescript should be prepared on one side of a good grade of $8\frac{1}{2} \times 11$-inch white paper, with 1-inch margins on all sides. Mimeographed or duplicated manuscripts will be accepted *if they are indistinguishable from good typed copies.*

Submit two complete copies in order to expedite processing of the manuscript. Each copy *must* include all figures and tables.

Number the pages consecutively. *Page 1* should contain the article title, author(s), and affiliation(s); at the bottom of the page type a short running head title not exceeding 45 characters (including spaces), and the name and complete mailing address (including zip code) of the person to whom proofs should be sent. *Page 2* should contain a short abstract, approximately 100 to 150 words in length.

Headings. The organization of the paper must be clearly indicated by appropriate headings and subheadings.

Abbreviations. Do not use final periods after abbreviations of measure (cm, sec, kg, etc.) in text or in tables, except for "in." (inch). Use the *ACS Style Guide*, 1986 (American Chemical Society) as a reference.

List of Symbols. A typewritten list of identified symbols should be submitted along with the manuscript. The list should not define the symbols mathematically, but should serve to identify them typographically. The list will not appear in print, but is essential in order to avoid costly corrections in proof.

Equations. Number equations consecutively, with the number placed in square brackets to the extreme right of the equation. Refer to equations as Eq. [3] or simply [3] except at the beginning of a sentence, when the word Equation should be spelled out. Punctuate equations to conform to their place in the syntax of the sentence.

Footnotes. Use only when absolutely necessary, in which case type the footnotes consecutively, double-spaced, on a separate sheet of paper in the order of their appearance in the text. Use Arabic numbers 1, 2, etc. In the text refer footnotes by superscript 1, 2, etc. Footnotes to the title should be indicated by superscript*, †, etc.

Tables. Number tables consecutively with Arabic numerals in order of their appearance in the text. Type each table, double-spaced throughout, on a separate sheet; avoid vertical rules. Supply a short descriptive title below the table number. Type table footnotes, lettered *a*, *b*, etc., at the end of the table.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

It is essential that all illustrations be drawn with a lettering set, and therefore in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black. Photographs should be submitted as glossy prints (5×7 or 8×10 inches) and not marred by staples, paper clips, or pencil marks. Original drawings no larger than $8\frac{1}{2} \times 11$ inches are preferred.

Xerox copies are not acceptable.

Charges to authors. Exceptionally numerous illustrations or elaborate tables will require special arrangement with the publisher for sharing the cost of reproduction. Color figures or plates will be accepted only if the authors defray the cost.

References. These should be cited in the text by consecutive underlined numbers in parentheses and listed at the end of the paper in numerical order. Note the following style for book and journal citations:

1. Hess, C. F., and Brodda, K. On the optimum selection of diagnostic tests in computer-aided differential diagnosis. *Comput. Biomed. Res.* **17,** 389 (1984).
2. Sterling, T. D., and Perry, H. Computation of radiation dosages. *In* "Computers in Biomedical Research" (R. W. Stacy and B. D. Waxman, Eds.), Vol. 1, pp. 439–464. Academic Press, New York, 1965.
3. Winters, R. W., Engel, K., and Dell, R. B. "Acid Base Physiology in Medicine, a Self Instruction Program." The London Co., Westlake, OH, 1967.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the text as such, and should not be included in the reference list.

Author's alterations in excess of 10% of the cost of composition will be charged to the author.

Reprints. 50 reprints will be supplied free of charge. Additional reprints can be ordered on the form accompanying the proofs.
